

Chapter 1

Introduction

A note on the use of these ppt slides:

We're making these slides freely available to all (faculty, students, readers). They're in PowerPoint form so you can add, modify, and delete slides (including this one) and slide content to suit your needs. They obviously represent a *lot* of work on our part. In return for use, we only ask the following:

- If you use these slides (e.g., in a class) in substantially unaltered form, that you mention their source (after all, we'd like people to use our book!)
- If you post any slides in substantially unaltered form on a www site, that you note that they are adapted from (or perhaps identical to) our slides, and note our copyright of this material.

Thanks and enjoy! JFK/KWR

Introduction 1-1

Chapter 1: Introduction

Our goal:

- get "feel" and terminology
- more depth, detail *later* in course
- approach:
 - ❖ use Internet as example

Overview:

- what's the Internet?
- what's a protocol?
- network edge; hosts, access net, physical media
- network core: packet/circuit switching, Internet structure
- performance: loss, delay, throughput
- security
- protocol layers, service models
- history

Introduction 1-2

Chapter 1: roadmap

1.1 What *is* the Internet?

1.2 Network edge

- end systems, access networks, links

1.3 Network core

- circuit switching, packet switching, network structure

1.4 Delay, loss and throughput in packet-switched networks

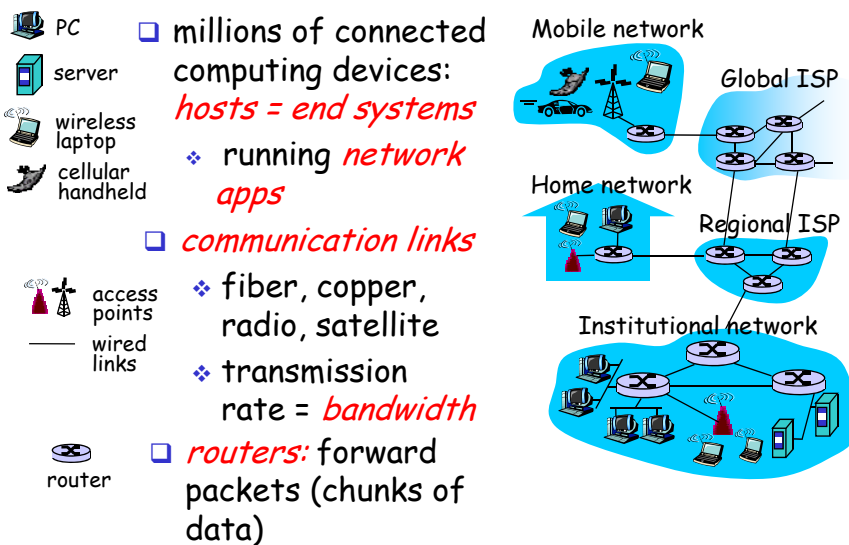

1.5 Protocol layers, service models

1.6 Networks under attack: security

1.7 History

Introduction 1-3

What's the Internet: "nuts and bolts" view

Introduction 1-4

"Cool" internet appliances

IP picture frame
<http://www.ceiva.com/>

Web-enabled toaster +
weather forecaster

World's smallest web server
<http://www-ccs.cs.umass.edu/~shri/iPic.html>

Internet phones

Introduction 1-5

What's the Internet: "nuts and bolts" view

- ❑ **protocols** control sending, receiving of msgs
 - ❖ e.g., TCP, IP, HTTP, Skype, Ethernet
- ❑ **Internet: "network of networks"**
 - ❖ loosely hierarchical
 - ❖ public Internet versus private intranet
- ❑ **Internet standards**
 - ❖ RFC: Request for comments
 - ❖ IETF: Internet Engineering Task Force

Introduction 1-6

What's the Internet: a service view

- **communication infrastructure** enables distributed applications:
 - ❖ Web, VoIP, email, games, e-commerce, file sharing
- **communication services provided to apps:**
 - ❖ reliable data delivery from source to destination
 - ❖ "best effort" (unreliable) data delivery

Introduction 1-7

What's a protocol?

human protocols:

- "what's the time?"
- "I have a question"
- introductions

... specific msgs sent

... specific actions taken when msgs received, or other events

network protocols:

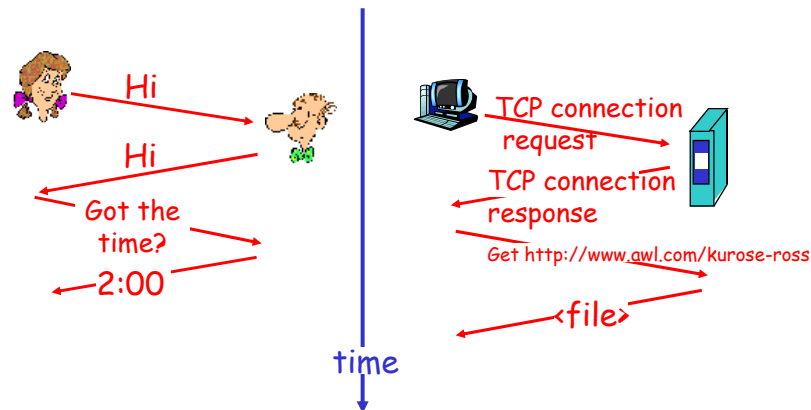

- machines rather than humans
- all communication activity in Internet governed by protocols

protocols define format, order of msgs sent and received among network entities, and actions taken on msg transmission, receipt

Introduction 1-8

What's a protocol?

a human protocol and a computer network protocol:

Q: Other human protocols?

Introduction 1-9

Chapter 1: roadmap

- 1.1 What *is* the Internet?
- 1.2 Network edge
 - end systems, access networks, links
- 1.3 Network core
 - circuit switching, packet switching, network structure
- 1.4 Delay, loss and throughput in packet-switched networks
- 1.5 Protocol layers, service models
- 1.6 Networks under attack: security
- 1.7 History

Introduction 1-10

A closer look at network structure:

- **network edge:**
 - ❖ applications and hosts
- **access networks, physical media:**
 - ❖ wired, wireless communication links
- **network core:**
 - ❖ interconnected routers
 - ❖ network of networks

Introduction 1-11

The network edge:

- **end systems (hosts):**
 - ❖ run application programs
 - ❖ e.g. Web, email
 - ❖ at "edge of network"
- **client/server model**
 - ❖ client host requests, receives service from always-on server
 - ❖ e.g. Web browser/server; email client/server
- **peer-peer model:**
 - ❖ minimal (or no) use of dedicated servers
 - ❖ e.g. Skype, BitTorrent

Introduction 1-12

Access networks and physical media

Q: How to connect end systems to edge router?

- residential access nets
- institutional access networks (school, company)
- mobile access networks

Keep in mind:

- bandwidth (bits per second) of access network?
- shared or dedicated?

Introduction 1-13

Dial-up Modem

- ❖ Uses existing telephony infrastructure
 - ❖ Home is connected to **central office**
- ❖ up to 56Kbps direct access to router (often less)
- ❖ Can't surf and phone at same time: not **"always on"**

Digital Subscriber Line (DSL)

- ❖ Also uses existing telephone infrastructure
- ❖ up to 1 Mbps upstream (today typically < 256 kbps)
- ❖ up to 8 Mbps downstream (today typically < 1 Mbps)
- ❖ dedicated physical line to telephone central office

Residential access: cable modems

- ❑ Does not use telephone infrastructure
 - ❖ Instead uses cable TV infrastructure
- ❑ **HFC: hybrid fiber coax**
 - ❖ asymmetric: up to 30Mbps downstream, 2 Mbps upstream
- ❑ **network** of cable and fiber attaches homes to ISP router
 - ❖ homes **share access** to router
 - ❖ unlike DSL, which has **dedicated access**

Residential access: cable modems

Introduction 1-17

Cable Network Architecture: Overview

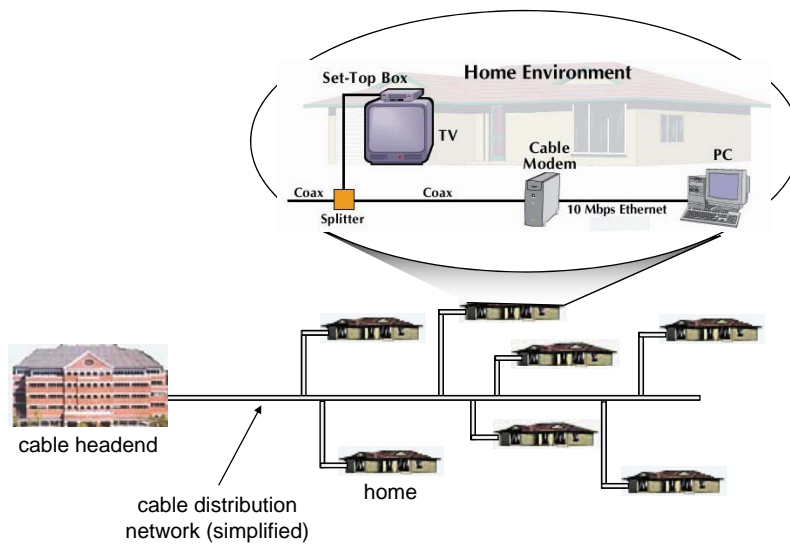

Introduction 1-18

Cable Network Architecture: Overview

Introduction 1-19

Cable Network Architecture: Overview

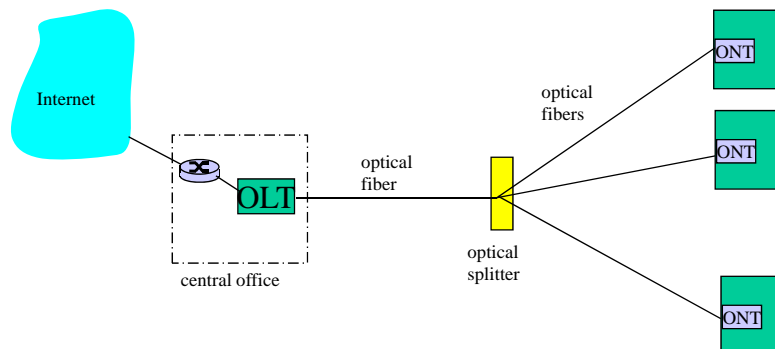

Introduction 1-20

Cable Network Architecture: Overview

Introduction 1-21

Fiber to the Home

- ❑ Optical links from central office to the home
- ❑ Two competing optical technologies:
 - ❖ Passive Optical network (PON)
 - ❖ Active Optical Network (PAN)
- ❑ Much higher Internet rates; fiber also carries television and phone services

Ethernet Internet access

- ❑ Typically used in companies, universities, etc
- ❑ 10 Mbs, 100Mbps, 1Gbps, 10Gbps Ethernet
- ❑ Today, end systems typically connect into Ethernet switch

Wireless access networks

- ❑ shared *wireless access* network connects end system to router
 - ❖ via base station aka "access point"
- ❑ **wireless LANs:**
 - ❖ 802.11b/g (WiFi): 11 or 54 Mbps
- ❑ **wider-area wireless access**
 - ❖ provided by telco operator
 - ❖ ~1Mbps over cellular system (EVDO, HSDPA)
 - ❖ next up (?): WiMAX (10's Mbps) over wide area

Home networks

Typical home network components:

- ❑ DSL or cable modem
- ❑ router/firewall/NAT
- ❑ Ethernet
- ❑ wireless access point

Introduction 1-25

Physical Media

- ❑ **Bit:** propagates between transmitter/rcvr pairs
- ❑ **physical link:** what lies between transmitter & receiver
- ❑ **guided media:**
 - ❖ signals propagate in solid media: copper, fiber, coax
- ❑ **unguided media:**
 - ❖ signals propagate freely, e.g., radio

Twisted Pair (TP)

- ❑ two insulated copper wires
 - ❖ Category 3: traditional phone wires, 10 Mbps Ethernet
 - ❖ Category 5: 100Mbps Ethernet

Introduction 1-26

Physical Media: coax, fiber

Coaxial cable:

- ❑ two concentric copper conductors
- ❑ bidirectional
- ❑ baseband:
 - ❖ single channel on cable
 - ❖ legacy Ethernet
- ❑ broadband:
 - ❖ multiple channels on cable
 - ❖ HFC

Fiber optic cable:

- ❑ glass fiber carrying light pulses, each pulse a bit
- ❑ high-speed operation:
 - ❖ high-speed point-to-point transmission (e.g., 10's-100's Gps)
- ❑ low error rate: repeaters spaced far apart ; immune to electromagnetic noise

Introduction 1-27

Physical media: radio

- ❑ signal carried in electromagnetic spectrum
- ❑ no physical "wire"
- ❑ bidirectional
- ❑ propagation environment effects:
 - ❖ reflection
 - ❖ obstruction by objects
 - ❖ interference

Radio link types:

- ❑ **terrestrial microwave**
 - ❖ e.g. up to 45 Mbps channels
- ❑ **LAN** (e.g., Wifi)
 - ❖ 11Mbps, 54 Mbps
- ❑ **wide-area** (e.g., cellular)
 - ❖ 3G cellular: ~ 1 Mbps
- ❑ **satellite**
 - ❖ Kbps to 45Mbps channel (or multiple smaller channels)
 - ❖ 270 msec end-end delay
 - ❖ geosynchronous versus low altitude

Introduction 1-28
